- What would you like to know about it?

Definitions:

- Blurry – harder to see; less clear
- Numb – having lost feeling
- Amputate – to cut off

Used by permission of the Indiana State Medical Association

Reading

16 Are you often thirsty? Have you been losing weight? Do you feel tired and have little
36 energy? Is your vision blurry? Do your feet or hands feel numb? Do cuts take a long time to heal?
49 If you answered yes to some of these questions, you may have diabetes.

65 Diabetes is a serious disease. It can cause many problems. It can cause problems with your
82 vision. You could go blind. It can cause problems with your kidneys. They could fail, or quit
99 working. It can cause problems with your heart. You could have a stroke. It can cause problems
with your circulation. Some diabetics need to have fingers or toes amputated.

111 Millions of people are diagnosed with diabetes every year. If someone in your family has
126 it, you are at risk. If you are a person of color, you are at risk. If you are overweight and do not
149 exercise, you are at great risk. In fact, research confirms that there is a direct link between **obesity**
167 and the risk of developing diabetes.

173 There is no cure for diabetes, but it can be treated. With proper medical treatment, and careful
190 diet and exercise, diabetics can live a long and healthy life. Finding out if you have diabetes is
208 important. At least six million people in the U.S. have the disease and don't know it. If you think
227 you may be one of them, see your doctor.

Understanding

1. Who is most likely to be diabetic? _____
